

Business Requirements Document (BRD)

1. Document Overview

Project Name: Unified Sales & Performance Dashboard

Client / Business Unit: Retail Operations (DMART Varthur – Synthetic Case)

Prepared For: Store & Regional Management

Prepared By: Analytics Team

Date: 2026

2. Business Context

The DMART Varthur store generates large volumes of sales data across daily summaries, transaction-level details, SKU master data, and calendar attributes. While data exists in multiple formats (Excel extracts, reports), there is **no single, unified view** that allows managers to understand overall sales performance, trends, and problem areas quickly.

Currently, managers rely on: - Static Excel sheets - Manual calculations - Ad-hoc queries from the analytics team

This results in delayed decision-making, limited insights, and inconsistent interpretation of performance.

3. Primary Persona

Persona: Store / Regional Manager

Role: Oversees store performance, revenue targets, and operational efficiency

Experience Level: Business-focused, not technical

Tools Familiarity: Excel, basic reports, monthly summaries

Goals: - Understand daily, weekly, and monthly sales at a glance - Track whether the store is performing better or worse than expected - Identify high- and low-performing categories and products - Spot unusual drops or spikes in sales quickly

Pain Points: - No single dashboard showing end-to-end sales performance - Hard to connect daily sales with transaction-level drivers - Difficult to answer simple questions without analyst support - Time-consuming manual comparisons across files

4. Problem Statement

There is **no centralized dashboard** that consolidates sales, transactions, product performance, and calendar effects into a single, easy-to-understand view.

As a result: - Managers lack real-time visibility into store performance - Root-cause analysis ("Why did sales drop?") is slow - Decisions on promotions, staffing, and inventory are reactive - Important trends (weekend uplift, salary-week impact, festival spikes) are not clearly visible

5. Business Objectives

The objective of this project is to create a **single source of truth dashboard** that:

- Provides a clear snapshot of overall sales performance
 - Enables drill-down from summary metrics to transaction-level details
 - Helps managers identify trends, risks, and opportunities without technical assistance
 - Reduces dependency on ad-hoc Excel analysis
-

6. In-Scope Requirements

Functional Requirements

1. Overall Sales View

- Total Net Sales
- Total Bills
- Total Units Sold
- Average Bill Value

- GST and Net Revenue

2. Time-Based Analysis

- Daily, weekly, and monthly trends
- Weekend vs weekday comparison
- Salary week vs non-salary week performance
- Festival vs non-festival period comparison

3. Category Performance

- Sales by category (Staples, Grocery, Personal Care, Home, Apparel)
- Contribution % by category
- Category-wise growth or decline over time

4. Product / SKU Insights

- Top-selling SKUs by revenue and volume
- Slow-moving SKUs
- High-discount vs low-discount products

5. Transaction Insights

- Average items per bill
- Payment mode split (UPI, Card, Cash)
- Distribution of bill values

6. Filtering & Drill-down

- Date range filters
 - Category and SKU filters
 - Ability to drill from summary to detailed transactions
-

7. Out of Scope

- Real-time POS integration
 - Inventory replenishment automation
 - Customer-level analytics
 - Predictive forecasting (phase 2)
-

8. Key Metrics & KPIs

- Net Sales
 - Total Bills
 - Average Bill Value (ABV)
 - Units per Bill
 - Category Contribution %
 - Discount Impact on Revenue
 - Weekend / Festival Sales Uplift
-

9. Data Sources

- Daily Sales Summary (Excel)
 - Transaction-Level Sales Data (Excel)
 - SKU Master Data
 - Calendar & Business Flags (Weekend, Salary Week, Festival)
-

10. Success Criteria

The solution will be considered successful if: - Managers can answer common performance questions without analyst help - Sales trends and anomalies are visible within seconds - Monthly review preparation time is reduced significantly - The dashboard is actively used in weekly and monthly reviews

11. Assumptions & Constraints

Assumptions: - Data is refreshed on a daily basis - Users access the dashboard via desktop

Constraints: - Data is historical (not real-time) - Limited to one store in phase 1
